Allowable Subject Matter

1. The indicated allowability of claims 1-6 is withdrawn in view of the newly discovered reference(s) to Bassill et al (US 6,727,482). The Examiner regrets for any inconveniences. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Bassill et al (US 6,727,482). Bassill discloses, figure 5, an inductor (80) and a resonant capacitor (12, 22) adapted to operate at a fixed frequency and comprising at least one pair of transistors (30,40) controlled at a variable duty cycle to modify the power, characterized in that it comprises a first diode (61) between a first transistor (30) of said pair and the supply of said generator (AC input) and a second diode (11) between the connection point of the inductor (80) and the resonant capacitor (12, 22) and the connection point of said first transistor (30) and said first diode (61).
4. Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
